

Final Project Report

SEC1101 – Introduction to Cybersecurity

Stop the Café Hacker

Team Members:

Aram Albarqi, Aseel Alghamdi,
Layan Alswaat, Reham Wan derman,
Sara Almalki.

Topic Assigned and Why It Matters

Our assigned topic was **Device and Network Security**, an essential part of cybersecurity that impacts daily life. This topic matters because many people—including students—connect to public Wi-Fi, use weak passwords, click suspicious links, and perform online transactions without understanding the risks involved.

Public places such as cafés create opportunities for attackers to perform man-in-the-middle attacks, steal login credentials, or send phishing messages. Therefore, raising awareness about safe digital behavior helps prevent data theft, identity fraud, and financial loss, and encourages safer online habits among users.

Booth Description

Our booth, titled “Stop the Café Hacker,” was an interactive, scenario-based learning experience. Instead of traditional slides, visitors played through four realistic cybersecurity situations:

Station 1: Wi-Fi Selection

Choosing between safe and unsafe networks.

Station 2: Card Payment Safety

Identifying the safe method for paying inside a café.

Station 3: Password & 2FA Security

Choosing a strong password and activating two-factor authentication.

Station 4: Phishing Messages

Recognizing fake or suspicious messages.

Visitors received instant feedback depending on their choices.

Correct answers earned points, while unsafe answers triggered warnings from the “Hacker.”

The booth included:

- Main poster
- Rules of the game
- Scoring cards
- Cybersecurity tip cards
- Four themed stations
- Stickers
- A photo frame
- A QR code linked to the feedback form

Roles of Each Team Member

Aram Albarqi

Created the full hacker–user dialogue, designed the Google Form, generated the QR code, and recorded the number of visitors.

Aseel Alghamdi

Prepared cybersecurity tips (Arabic & English) designed scoring cards, Wi-Fi station, and Password/2FA station.

Layan Alswaat

Designed the game rules sheet, stickers, and main booth poster.

Reham Wan derman

Designed the Payment Station and Phishing Station.

Sara Almalki

Handled printing of posters, cards, stickers, and tip sheets.

Both Materials

This section contains the designs and printed materials used inside the booth:

Both poster		
Ru]es of the game		

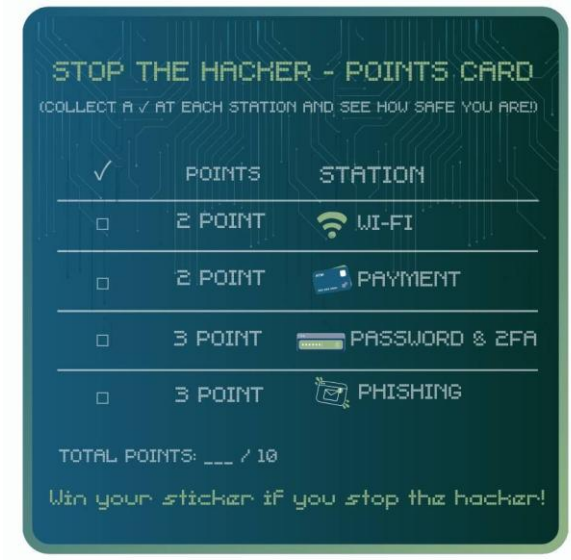

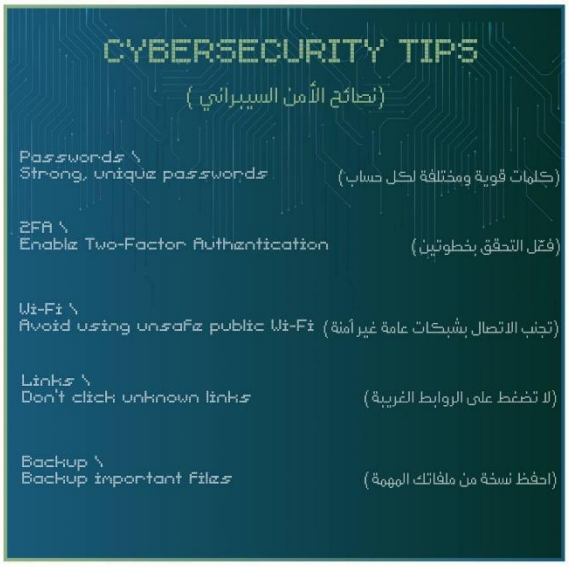

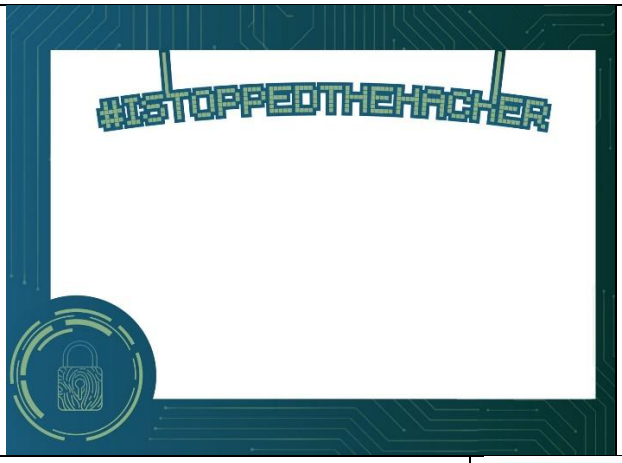

Scoring cards		
Cybersecurity tips cards		
QR code card		

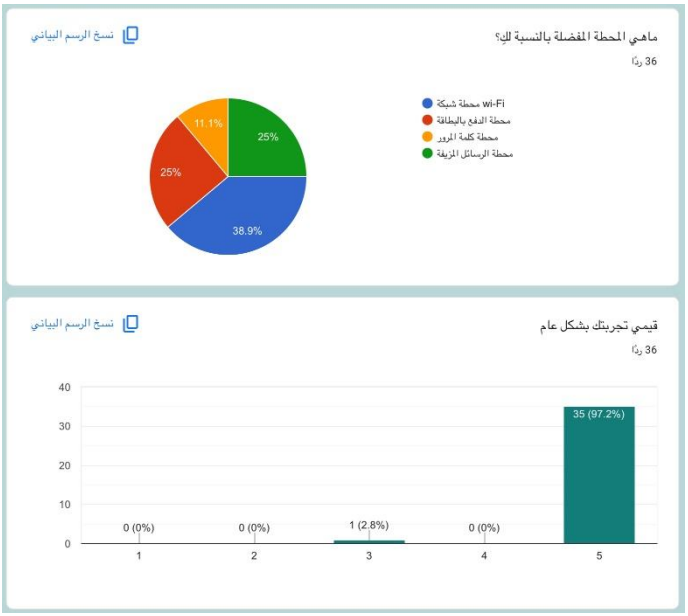

photo frame	 
Wi-Fi station board	
Payment station board	
Password & 2FA station board	
Phishing station board	

Feedback & Results

We collected feedback using a Google Form to evaluate how much visitors learned from the activity. Most visitors reported gaining new awareness about:

- Safe Wi-Fi usage
- Password strength
- Two-factor authentication
- Spotting phishing messages

The following visuals represent the results:

Reflection Paragraphs

Reflection – Aram Albarqi

In this project, my contribution included writing the full hacker–user dialogue, creating the Google Form for feedback, generating the QR code, and recording the number of visitors. I also helped organize the flow of the game during the event to ensure participants understood each station.

I learned how to turn cybersecurity concepts into simple and engaging activities that anyone can understand, especially topics like phishing, password strength, and safe Wi-Fi usage. This experience strengthened my teamwork and communication skills and improved my ability to explain technical ideas in a clear and interactive way.

Reflection – Aseel Abdulaziz Alghamdi

In this project, my personal contribution initially focused on creating the Wi-Fi Safety and Password & 2FA stations within the game, but due to time constraints, I ended up building all four stations in English. I also prepared cybersecurity tips in Arabic and English and designed the scoring cards, keeping the game smooth and easy to navigate.

I learned how to turn cybersecurity concepts into a simple, practical, and engaging format that is also playful and interactive, so people can learn while enjoying the experience.
This experience helped me develop skills in teamwork, communication, and delivering cybersecurity concepts in a simple and engaging way.

Reflection – Layan Faez Alswaat

In this project, my personal contribution included designing the game rules sheet, creating the stickers, and developing the main booth poster. I worked on coordinating colors, ensuring information clarity, and making the visual elements appealing and easy to understand.

I learned how to simplify cybersecurity concepts in an enjoyable and visual way, and I also improved my skills in using design tools.
This experience helped me develop skills in teamwork, communication, and presenting ideas clearly, strengthening my ability to deliver cybersecurity concepts in a simple and engaging way.

Reflection – Reham Wan Hussein

In this project, my personal contribution: initially was to create the Payment and Phishing stations. However, my task shifted, and I ended up developing the Arabic version of the game and supported my team with most of the design work.

I learned: how games can make information easier to understand and remember, and how they can be used to spread awareness effectively.

This experience helped me develop skills in teamwork, communication, and delivering cybersecurity concepts in a simple and engaging way

Reflection – Sara Atiah Almalk

In this project, my personal contribution included managing the logistical and design tasks: I handled printing of posters, cards, stickers, and tip sheets, ensuring that all materials were professionally laid out, cohesive, and ready for distribution. I also coordinated with team members to finalize the graphics and content, ensuring clarity and consistency across all the printed media.

I learned a lot about project planning, visual communication, and the importance of detail in conveying cybersecurity messages. This experience helped me develop stronger skills in teamwork and communication, and taught me how to translate complex cybersecurity concepts into simple, engaging, and accessible materials for a general audience.

Conclusion

The project successfully delivered cybersecurity awareness using an interactive, engaging format instead of a static presentation. Visitors gained practical knowledge about device and network security through real-life situations.

The team's creativity, collaboration, and planning resulted in a dynamic and educational booth aligned with the objectives of the Introduction to Cybersecurity course.
